Claim Rejections - 35 USC § 103

1. Claims 28-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hess (4,285,347).

Hess teaches a device which is inserted into a hole, or foramen, of the spine. The curved members 34 and 32 are considered to be obvious over the extendable member of claim 28 in that they are considered to form a curl, as that term is broadly defined, when in use and deployed inside the spine. Further, to make the curve an electrode (as shown by other art of record) would have been obvious since by doing so more tissue could be stimulated, as desired, and it would make the contact 30 of Hess unnecessary. Still further, one of ordinary skill would understand that various portions of the patient's spine can be stimulated with the device of Hess depending on the intended purpose of the user.

Allowable Subject Matter

2. Claims 1-19,21-27 are allowed.
